JACKSON MOORE *Senior Full-Stack Engineer*

welcome.devs@gmail.com +1 (480) 271 8467

Profile

I am a dedicated Full-Stack Engineer with a strong frontend background, building high-quality, performant, and visually engaging web applications using modern JavaScript frameworks. I specialize in crafting intuitive user interfaces and scalable architectures with Angular, React, TypeScript, and RxJS, backed by Node.js APIs and PostgreSQL data layers, while maintaining a deep focus on clean code, usability, and efficient workflows. I currently lead full-stack development of the education app at Timeline International AG in Switzerland.

I take pride in being both analytical and collaborative, equally comfortable leading independent projects or working as part of a dynamic development team. Passionate about continuous learning, I stay up-to-date with the evolving frontend ecosystem and enjoy exploring emerging technologies that enhance web performance and development productivity.

In my free time, I enjoy playing table tennis, foosball, and chess, activities that sharpen my focus and problem-solving mindset.

Professional Experience

11/2025 – Present

Senior Full-Stack Developer

Timeline International AG, Rheinfelden, Switzerland

- Education App Delivery: Took ownership of making the company's education app work end to end, stabilizing the core learning flows, fixing long-standing defects, and shipping the features that were blocking launch.
- Interactive Learning UI: Built rich, responsive interfaces for timelines, lessons, quizzes, and progress tracking that run smoothly on desktop, tablet, and mobile.
- Content & Data: Designed the APIs and data models behind courses, lessons, assessments, and learner progress, keeping progress in sync across devices.
- AI-Assisted Learning: Added an AI study companion that explains lessons in plain language and generates flashcards and quizzes from course content.
- Performance: Cut load times with code splitting, caching, and optimized media delivery, so lessons open quickly even on slower school networks.
- Quality & Reliability: Introduced automated tests, CI/CD pipelines, and error monitoring to catch regressions before they reach learners.
- Collaboration: Work closely with educators, designers, and product owners to turn teaching goals into features students actually use.

03/2021 – 03/2025

Full-Stack Developer

Sydney Technology Solutions

- Application Architecture: Designing the overall architecture of large-scale Angular applications, including the structure of modules, components, and services.
- Design Patterns: Implementing design patterns (e.g., MVC, MVVM) to ensure maintainable, scalable, and efficient code.
- Component Design: Designing reusable and modular components that can be shared across the application.
- UI/UX Guidance: Working with UI/UX designers to ensure the application is user-friendly, visually appealing, and responsive.
- Advanced Angular Features: Utilizing advanced features of Angular such as lazy loading, change detection strategies, state management, and custom directives/pipes.
- Optimizing Performance: Ensuring that the application is optimized for performance by implementing best practices such as AOT (Ahead-of-Time) compilation, tree shaking, code splitting, and caching.
- Cross-browser Compatibility: Ensuring that the application functions consistently across different browsers and devices.

08/2017 – 01/2021 **Angular Developer**
IT Alliance Australia

- Develop Components and Services: Create Angular components, services, and modules to handle the frontend logic of the web application.
- API Integration: Integrate with backend APIs to fetch, display, and manage data within the application, ensuring proper error handling and optimization.
- State Management: Use appropriate state management solutions (like NgRx or services) for handling the data flow within the app.
- Responsive Design: Build applications that work across various screen sizes and devices, ensuring the app is fully responsive using CSS frameworks (e.g., Bootstrap, Material) or custom CSS.
- Optimizing Load Time: Apply best practices such as lazy loading, tree-shaking, and AOT (Ahead-of-Time) compilation to ensure fast load times and efficient performance.
- Handling Large Data Sets: Implement techniques like pagination or infinite scrolling for handling large sets of data without compromising performance.

Education

2013 – 2017 **BACHELOR IN COMPUTER SCIENCE**
Australian Catholic University

Skills

Web Application
JavaScript
Python
React
LangChain
Node.js
MySQL
MongoDB
Supabase
Docker
Artificial Intelligence
TypeScript
Angular
Next.js
RESTful API
Express
PostgreSQL
Firebase
Amazon Web Services
CI/CD

Certificates
