JACKSON MOORE *Full-Stack Engineer*

welcome.devs@gmail.com +1 (480) 271 8467

Profile

I am a dedicated Frontend Engineer with a strong background in building high-quality, performant, and visually engaging web applications using modern JavaScript frameworks. I specialize in crafting intuitive user interfaces and scalable frontend architectures with Angular, TypeScript, and RxJS, while maintaining a deep focus on clean code, usability, and efficient workflows. My approach combines creativity and engineering discipline, from designing seamless user experiences to implementing advanced data handling and automation solutions that streamline business processes.
I take pride in being both analytical and collaborative, equally comfortable leading independent projects or working as part of a dynamic development team. Passionate about continuous learning, I stay up-to-date with the evolving frontend ecosystem and enjoy exploring emerging technologies that enhance web performance and development productivity.
In my free time, I enjoy playing table tennis, foosball, and chess, activities that sharpen my focus and problem-solving mindset.

Education

2013 – 2017 **BACHELOR IN COMPUTER SCIENCE**
Australian Catholic University

Professional Experience

08/2017 – 01/2021 **Angular Developer**
IT Alliance Australia

- Develop Components and Services: Create Angular components, services, and modules to handle the frontend logic of the web application.
- API Integration: Integrate with backend APIs to fetch, display, and manage data within the application, ensuring proper error handling and optimization.
- State Management: Use appropriate state management solutions (like NgRx or services) for handling the data flow within the app.
- Responsive Design: Build applications that work across various screen sizes and devices, ensuring the app is fully responsive using CSS frameworks (e.g., Bootstrap, Material) or custom CSS.
- Optimizing Load Time: Apply best practices such as lazy loading, tree-shaking, and AOT (Ahead-of-Time) compilation to ensure fast load times and efficient performance.
- Handling Large Data Sets: Implement techniques like pagination or infinite scrolling for handling large sets of data without compromising performance.

03/2021 – 03/2025 **Full-Stack Developer**

Sydney Technology Solutions

- Application Architecture: Designing the overall architecture of large-scale Angular applications, including the structure of modules, components, and services.
- Design Patterns: Implementing design patterns (e.g., MVC, MVVM) to ensure maintainable, scalable, and efficient code.
- Component Design: Designing reusable and modular components that can be shared across the application.
- UI/UX Guidance: Working with UI/UX designers to ensure the application is user-friendly, visually appealing, and responsive.
- Advanced Angular Features: Utilizing advanced features of Angular such as lazy loading, change detection strategies, state management, and custom directives/pipes.
- Optimizing Performance: Ensuring that the application is optimized for performance by implementing best practices such as AOT (Ahead-of-Time) compilation, tree shaking, code splitting, and caching.
- Cross-browser Compatibility: Ensuring that the application functions consistently across different browsers and devices.

Skills

Web Application	Artificial Intelligence
JavaScript	TypeScript
Python	Angular
React	Next.js
LangChain	RESTful API
Node.js	Express
MySQL	PostgreSQL
MongoDB	Firebase
Supabase	Amazon Web Services
Docker	CI/CD
